#### Description

RedRun valve actuators are the new generation of electrical, explosion proof adjustment and control valves and other motorized applications for HVAC systems in chemical, pharmaceutical, industrial and offshore/onshore plants, for use in Ex-areas zone 2 (gas) and zone 22 (dust).

Highest protection class and IP66 protection, compact dimensions, little weight, universal functions and technical data and an integrated heater guarantee safe operation even under difficult environmental conditions. High quality brushless motors guarantee long life.

All actuators are programmable and adjustable on site. Special tools or equipment are not required. Motor running times and forces, according to the actuator type, are selectable or adjustable on site. The integrated universal power supply is self adaptable to input voltages in the range of 24...240 VAC/DC. The actuators are 100 % overload protected and self locking.

The modular concept offers the possibility to mount adjustable end switches for signalization.

# **Highlights**

- ▶ For all type of gas, mists, vapours and dust for use in zone 2 and 22
- ► Universal supply unit from 24...240 VAC/DC
- ► Integrated junction box
- ► Motor running times 2-3-4-6-9-12-15 s/mm, acc. to type
- ► Continuous control, feedback signals 0...10 VDC and 4...20 mA
- ▶ Reverse function
- ► Forces 500-1000-2500-5000-7500-10000 N, acc. to type
- ► Feedback gear unit, adjustable in steps 10 / 20 / 30 / 60 mm
- ► Mechanical stroke limitation, 5...60 mm stroke adjustable
- ► 100 % overload protected and self locking
- ► Compact design and small dimensions
- ► Robust aluminium housing (optional with seawater resistant coating)
- ► IP66 protection
- ► Manual override included + preparation for comfortable manual override
- ► Weight ~ 7 kg
- ► Integral safety temperature sensor
- Status indication by LED

# **Special option**

... -CTS

## **Electrical connection**

All actuators are equipped with a universal supply unit working at a voltage range from 24...240 VAC/DC. The supply unit is self adjusting to the connected voltage! Device must be fuse protected max. 5 AT.

Note current consumption acc. to running time and applied voltage (min. 2 A).

#### Integrated junction box Switch off the power Open cover of junction box 3. Put cable through cable gland into junction box Strip wires approx. 7 mm 5. Connect wires acc. to wiring diagram and type. Note: Wrong wiring expires guarantee Connect protection earth PE Fix wires, screw terminals Close cable entries tighten (IP66) 8. 9. Close cover junction box (regard gasket) analog in Supply analog out (3-6)IN/OUT control (3-4)

At initial operation a self adjustment has to be executed.

#### Parameter selection

Example:		Type Forces					Forces		
RedRun-25.50		RedRu	1-5.10-Y	▶	500 N	1.000 N			
		RedRu	n-25.50-\	<b>/</b> ▶	2.500 N	5.000 N			
Requested parameter:		RedRu	า-75.100-	Y►				7.500 N	10.000 N
Force	5.000 N				▼	▼		•	▼
Running time	6 s/mm	Runnin	g times	P	osition of	switch S F	Running times	Position	of switch
		2	s/mm	▶	00	05	4 s/mm ▶	00	05
Result: Switch position 07		3	s/mm	▶	01	06	6 s/mm ▶	01	06
		6	s/mm	▶	02	07	9 s/mm ▶	02	07
		9	s/mm	▶	03	08	12 s/mm ▶	03	08
1		12	s/mm	▶	04	09	15 s/mm ▶	04	09

#### Functions, adjustments and parameters

#### A) Self adjustment of stroke:

Push button (T) for minimum 3 seconds. The actuator will drive into both end positions to be adjusted. LED indicates GREEN.

Adjustment drive can be applied in any switch (S) position.

#### B) Selection of running time and force:

Put switch (S) into the correct selected position in acc. to above table. The selected parameter will work at next operation of the actuator. Adjustment can be done even without supply voltage. If supply voltage is available turn switch only if actuator is not running.

#### C) Force control:

a closed, b open = rod goes in b closed, a open = rod goes out

a and b closed = motor doesn't work, no function a and b opened = motor doesn't work, no function

#### **Dimensioning**

#### Force in blocking position after adjustment drive

The force in the end positions could be much more than the nominal force. Generally the valve is to check together with actuator and construed accordingly. Note the values in the "Technical Data".

#### Force during travel

The force during travel could be much more than the nominal force.

#### Self adjustment

To protect the valve/armature and the actuator in the end positions a self adjustment has to be performed before each commissioning or after any changes. Regard the gear belt adjustment according to the stroke!

RedRun-S-Y\_e

# **Special option**

#### ... -CTS

#### Stroke and gear belt adjustment

#### Stroke adjustment

Adjust/limitate stroke:
 Stroke can be adjusted by thread nut from min. 5 mm to 60 mm.

#### Open feedback gear's cover bracket

 Open cover bracket of feedback gear, thereby gear belt's tension is removed – not till then slide belt by hand to the right setting acc. to stroke. Do not use any tools.

Due to repeated movements of the red bar the setting of the gear belt gear can be changed. The position is corrected by closing the cover and starting a re-adjustment drive

#### Gear belt adjustment (for feedback signal U)

 Position gear belt acc. to set stroke. Do not use any sharp tools, manual operation only. Mind positioning. Set acc. to stroke.

# Stroke 10 mm 20 mm

#### Feedback signal

By gear belt setting the feedback signal 0...10 V / 4...20 mA is adjusted to stroke. Example:

For stroke of 26 mm follows gear belt setting to position 30 mm. Start adjustment drive by pushing button (T) for 3 s. Thereby the feedback signal is setting stroke automatically to 26 mm (see also above "2. Stroke adjustment").

#### Close cover bracket of feedback gear

30 mm

Note right position of gear belt! Close bracket, thereby the gear belt is automatically tensioned.

#### Remount cover

6. Note: cover gasket must be fit in the groove while mounting! Tighten 5 screws

Switch on power

## Important information for installation and operation

- All national and international standards, rules and regulations for hazardous Ex-areas must be complied.
- Certified apparatus must be installed in accordance with manufacturer instructions. If the
  equipment is used in a manner not specified by the manufacturer, the safety protection
  provided by the equipment may be impaired.
- For electrical installations design, selection and erection, EN/IEC 60079-14 can be used.
- Supply cables must be installed in a fixed position and protected against mechanical damage
- For electrical connection use the integrated junction box
- Do not open the cover when circuits are live
- Connect potential earth
- Avoid temperature transfer from valve to actuator (note ambient temperature T<sub>a</sub>!)
- · Close all openings with min. IP66
- Flameproof enclosure is protected against mechanical damages acc. to EN 60079-ff
- For outdoor installation a protective weather shield against sun, rain and snow should be applied
- Actuators are maintenance free, an annual function test is recommended
- Clean only with damp cloth, avoid dust accumulation
- For electrical installations inspection and maintenance, EN/IEC 60079-17 can be used.

#### (i) Extra information (see additional data sheet)

Additional technical information, dimensions, installation instruction, illustration and failure indication

# Manual override

# **Attention**

Turn hand feed crank slowly! When approaching the end positions overturning is possible and could damage the valve or actuator.

- 1. Actuator must be in stop position
- 2. Turn red switch to change from motor to hand mode
- 3. Turn to required stroke with Allen key (top side):
  - clockwise = rod out
  - counterclockwise = rod in
- 4. Upon completion turn back to motor mode

When operating the manual override in case of failure it is possible that the gear decouples. It can be seen that the selector switch is turned on "motor", but when controlled the actuator does not execute any stroke movement.

The blockade is resolved by simultaneously rotating the motor-hand switch and turning the Allen key in the hexagon shaft. The gear engages.
